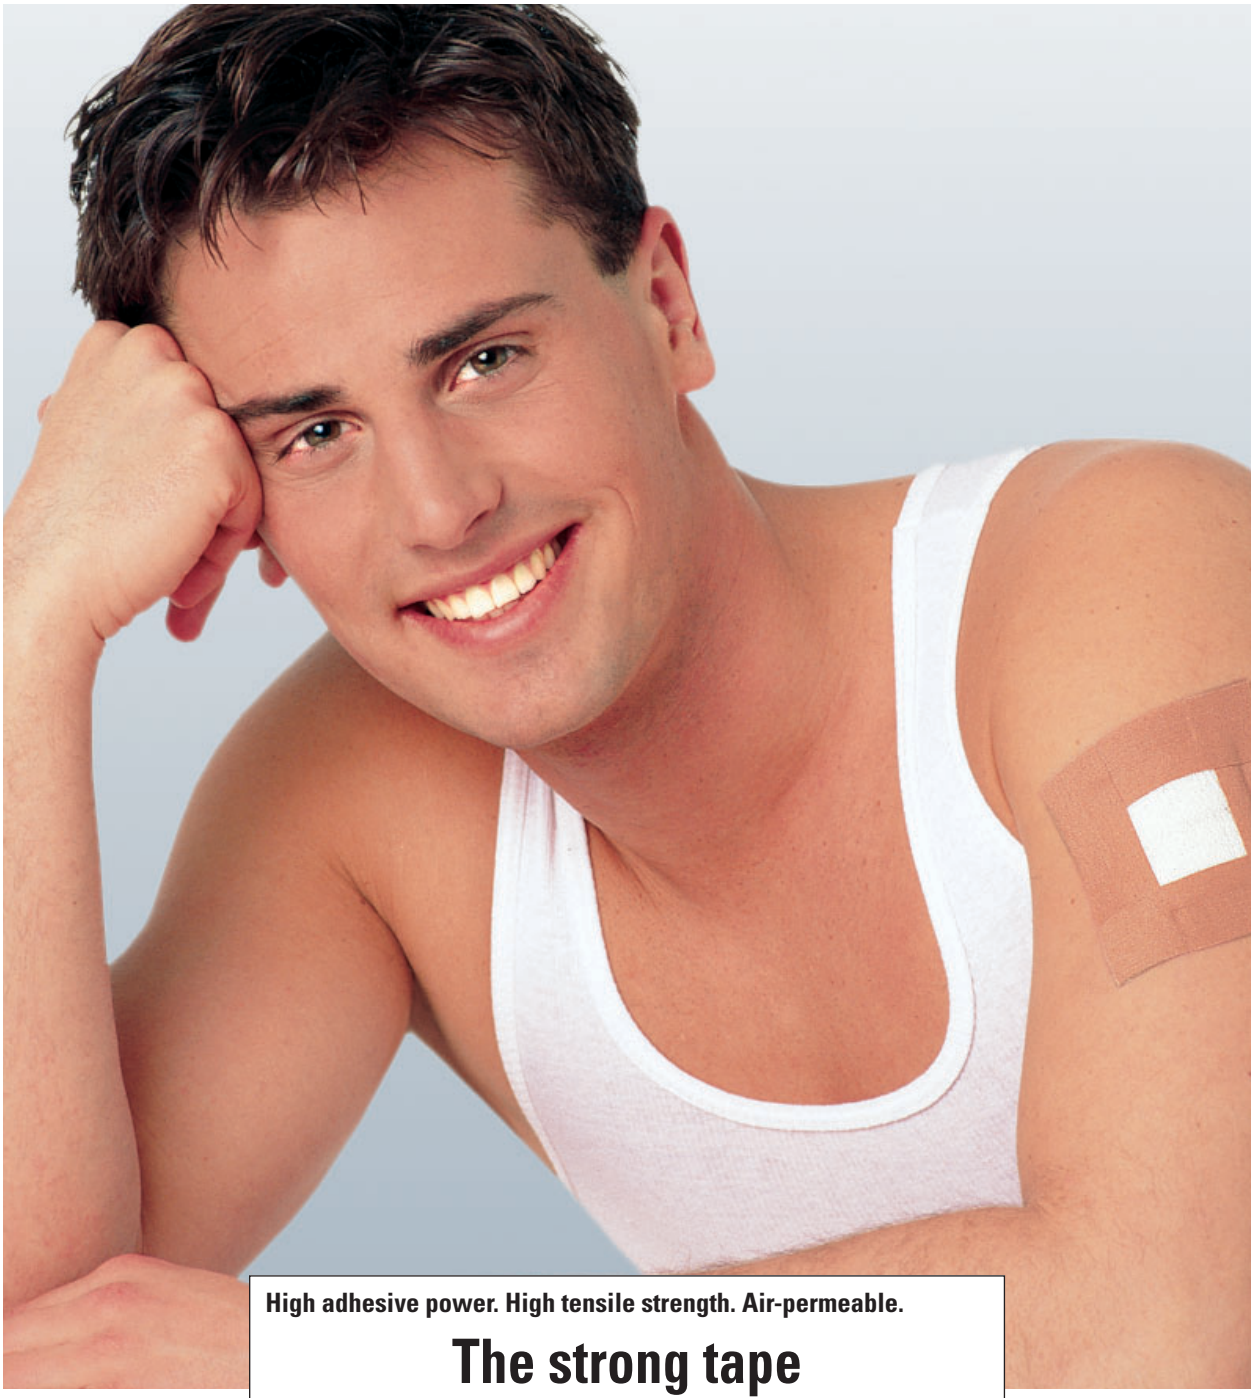
Leukoplast®



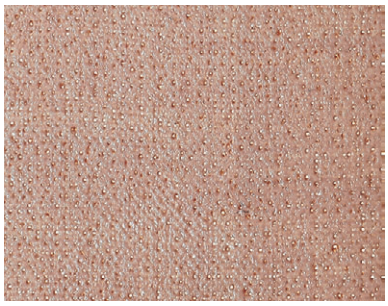
High adhesive power. High tensile strength. Air-permeable.

The strong tape for normal skin.

BSN medical

Leukoplast®

Whenever possible, the tape should be matched to the individual patient's skin and the specific use. Leukoplast® is to be recommended when particularly secure fixation is required.



Micropores in the adhesive of Leukoplast® provide improved air and moisture permeability.

Description and properties

Leukoplast® is a skin-coloured tape with a zinc oxide caoutchouc resin adhesive. The backing material is made of cellulose (viscose) which has a water-repellent surface.

Leukoplast® is distinguished by its high initial and permanent adhesion.

Further properties:

- For normal skin.
- High initial and permanent adhesion.
- Adheres strongly and reliably even under heavy strain.
- High tensile strength.
- Air and water vapour permeable.
- Water-repellent
- Thermostable at 0° to +30° C.

Main uses

Fixation of dressings of all types and sizes and for traction bandages.

Leukoplast® hospital
Leukoplast® hospital is a white tape, also with zinc oxide caoutchouc resin adhesive. It has the same properties as Leukoplast® and can be torn by hand.

Range available

Art. No.	Length	Width	Bandages per inner/ outer
Leukoplast®			
Rolls with snapring			
1521	5 m	1.25 cm	24/240
1522	5 m	2.50 cm	12/120
1524	5 m	5.00 cm	6/ 60
Hospital package without snapring			
1531	5 m	1.25 cm	24/240
1532	5 m	2.50 cm	12/120
1534	5 m	5.00 cm	6/ 60
1536	9.2 m	1.25 cm	24/240
1537	9.2 m	2.50 cm	12/120
1539	9.2 m	5.00 cm	6/ 60
Hospital package on cardboard core			
1691	9.2 m	1.25 cm	24/240
1692	9.2 m	2.50 cm	12/120
1693	9.2 m	5.00 cm	6/ 60
